CELERY

POL. *Selera*
IT. *Sedano*

CULTURE.—Sow seeds in light rich soil, as early as ground can be worked, in drills 8 or 10 inches apart, cover seeds about a quarter of an inch deep, rolling or treading them if ground is dry. When fairly out of seed leaf transplant or thin from 6 to 8 inches apart in the row, and let grow until wanted to plant out. Keep well wet down in dry weather. Set out in July, 6 to 8 inches apart, (press soil firmly against roots), in single row in shallow trenches, having previously worked a good quantity of well rotted manure in bottom of trench. It is well to work thoroughly into the soil under and around the trench a quantity of Our Garden Fertilizer. To raise good celery requires rich soil. Earth up two or three times, taking care not to let the earth get into the heart of the plant.

FR. Mais
GER. Mais

CORN

POL. *Kukurydza*
IT. *Mais*

(SWEET OR SUGAR)

CULTURE.—Plant in hills 3 ft. apart each way, and five or six kernels in a hill. Hoe often, drawing soil up to stem after first hoeing. Break off side shoots. Make ground very rich. If stable manure is used, it is perhaps best to plow it under. Use broadcast or in the hill Our Garden Fertilizer, worked well into soil. It has been found very beneficial to sow these fertilizers between the rows before cultivating and hoeing the second time.

We have been very careful in selecting the best and sweetest varieties of corn adapted to this section. The list below is arranged in order as they would mature.

	$\frac{1}{2}$ lb.	1lb.	2lbs.	6lbs.
EARLY MARKET —Earliest, large-eared, white, sweet	.20	.30	.45	1.25

American Mushrooms

CULTURE—Mushrooms are more easily cultivated than many people imagine and may be grown in any room or cellar where the temperature can be maintained at from 50 to 65 degrees. For the beds use a mixture of three parts horse droppings and one part good fresh loam. Before being placed in the bed, let the manure be put in some dry place to sweeten, mixing it thoroughly and turning it three or four times, when the loam may be added. Upon a dry firm bottom, make the bed by spreading a thin layer of the prepared mixture, pounding it firm, and continue this, till the bed is twelve inches thick. Leave it thus for about a week, or until the temperature has subsided to 85 degrees. Then make holes about ten inches apart, and put in each a piece of spawn about the size of an egg. Press the spawn firmly into the compost about two inches, leaving the top uncovered to allow the excess of heat and moisture to pass off without injury to the germs. After ten days, fill the holes and cover the whole bed with two inches of fresh loam, and over this place a few inches of straw. If the temperature is right, mushrooms will appear in six or eight weeks from the time of spawning. The bed will continue bearing from four to six weeks. If the surface of the bed becomes dry at any time, it should be moistened freely with water at a temperature of 90 to 100 degrees.

Our stock of spawn is replaced a number of times during the season and is giving excellent results.

CULTURE.—For Peas, light dry soil is best. Sow as early as ground can be worked, and again every ten days for succession. Peas may be sown as late as August 15th. Medium and late Peas must be planted early. Early Peas may be planted early or late, and the extra early very late. Sow in single or double rows from 4 to 6 feet apart, according to variety, and about an inch apart in the row and 4 in. deep. Hoe often, keep ground clean and fine. Most Dwarf Peas will bear better if bushed enough to keep them from the ground. If the pea louse attacks the vines, spray every day with clear water of the same temperature as the atmosphere, using force.

Going to paint

**TAKE THIS TIP
FROM US!**

USE LOWE BROTHERS HIGH STANDARD HOUSE PAINT

We are convinced that High Standard is as fine a house paint as we could offer you.

Paint is unlike any other merchandise sold in our store, because you cannot tell the kind of service it will render simply by looking into the can. Therefore, we feel that we must really know a paint thoroughly before offering it to our customers—and the only way to know paint is through actual tests. Many of these tests are made in our store from time to time and we watch High Standard jobs that have been done in your neighborhood. The results only serve to strengthen our faith and confidence in this fine paint.

Some cheap paints contain as much as 63% of water and other evaporating liquids leaving only 37% of film-forming solids to protect the surfaces upon which they are used. Lowe Brothers High Standard House Paint contains 90% of film-forming solids.

You will need fewer gallons if you use High Standard. You will also get more years of wear. Thus you will use less paint—per job and per year.

PORCH AND DECK

The most abused, hardest used part of the whole house is the porch floor.

Chairs and other furniture are dragged across it many times. It must withstand the weather—blistering heat from the sun, driving rains, and often sleet, ice and snow combine to test the finish.

Protect your porch floor and avoid replacement—paint it at least once each year. When you do, use Lowe Brothers Porch and Deck Paint—you'll be sure of obtaining the best possible protection.

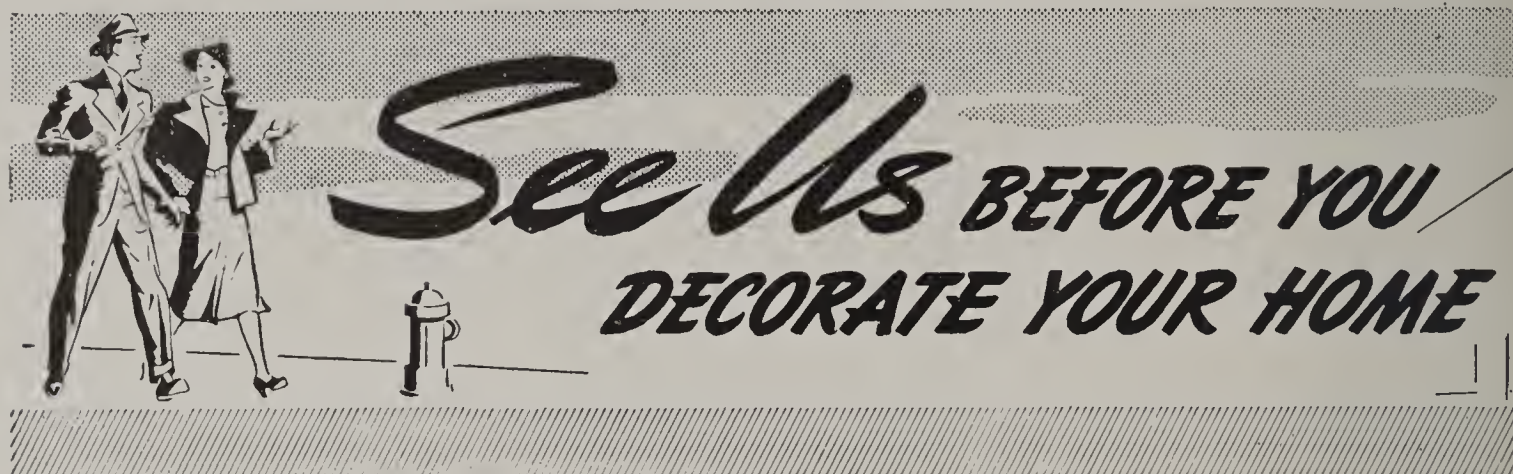

SHINGLE STAIN

Lowe Brothers Rich-Tone Shingle Stain is a preservative of excellent quality and beauty. It penetrates into and seals the surface of shingles and rough-sawed lumber. It is weather resistant and keeps out decay-starting moisture.

Rich-Tone Shingle Stains may be used on either new or old surfaces. In staining old work, simply brush on two coats of the stain. Complete directions are on the can label.

These stains may also be used on rough sawed wood fences, trellises, arbors and similar surfaces.

LOWE BROTHERS MELLO-GLOSS MAKES HOUSECLEANING EASY

Because of its beautiful, satiny, semi-gloss sheen, Mello-Gloss is a favorite with anyone who has ever used it.

In many homes it is used throughout—in entrance hall, living room, dining room, bedrooms, bathrooms, kitchen, breakfast room, play room, nursery and solarium. Its really washable surface adapts it to both walls and woodwork. It is truly a handsome finish in its pastel tones.

Its durability and long wear make it an ideal finish for schools, hospitals, churches, offices, stores, restaurants, beauty parlors, recreation rooms, gymnasiums, club houses and all kinds of public buildings where a semi-gloss finish is desired.

It serves equally well on plaster, wood, metal, canvas, wallboard and cement surfaces. It is a most versatile and dependable finish.

Once you use Mello-Gloss we know you'll continue to use it — that you'll always be completely satisfied with it for semi-gloss wall finishing.

MELLOTONE FLAT WALL FINISHES

In the home many rooms call for restful color effects. In these rooms you will find Mellotone especially desirable. Its adaptability to artistic decorative handling has made it popular in many of the finest churches.

A solution of mild soap and warm water quickly and easily removes dirt and restores to the Mellotone surface its first-day beauty.

Mellotone is designed for use on plaster, wood, concrete canvas, bur-lap, metal and wallboards.

NEPTUNITE VARNISHES

These varnishes excel in color, ease of working, flowing, quick-drying, high lustre and durability, and will not turn white when subjected to severe water exposure. All of the requirements of high grade varnishes have been considered in making this line and in each varnish the most desirable qualities for its particular purpose have been provided.

There are five Neptunite Varnishes — Spar, Floor, Interior, Rubbing and Seat — a varnish for every varnishing requirement.

THERE'S A LOWE BROTHERS PRODUCT

USE PLAX

**THE UNIVERSAL FINISH
OF 1,000 USES**

USE PLAX

**THE UNIVERSAL FINISH
FOR ALL ENAMELING**

PLAX IS TOUGH — IT RESISTS WEAR AND WEATHER

PLAX, "The Universal Finish" for all interior and exterior enameling, has a wider range of uses than any other type of decorating material. It sets a new standard of beauty and durability. Tough and elastic, it holds its gloss despite repeated cleaning. PLAX is for use on wood, metal, glass—almost any type of surface—interior or exterior. It is exceptionally satisfactory on walls—any room in which usage is rough, and frequent cleaning is required.

PLAX is easy to apply with a brush. It dries quickly but does not "set" too fast for easy working. One coat ordinarily is sufficient for refinishing and it provides a hard, rich, glossy, porcelain-like finish without the slightest trace of brushmarks.

PLAX is so tough that it resists heat, boiling water, alcohol, stains, smoke, smudge, wear and weather. This toughness makes it an excellent product for use wherever a finish must stand a great deal of hard wear. PLAX is very easy to clean with soap and water or household cleaners.

OIL STAIN

Lowe Brothers Non-Fading Oil Stain is for use on interior woodwork in homes, offices and public buildings.

- 1 Brushes on easily and dries very quickly.
- 2 Does not raise the grain of the wood.
- 3 It is non-fading — because it is made of permanent pigments.
- 4 Lasts indefinitely, because it actually sinks into the wood.
- 5 For use on hard or soft grain woods.

BRUSHES

It is poor economy to apply good paint with a cheap brush. Many painting jobs have turned out a complete failure chiefly because a cheap brush containing dirt and loose hairs was used. For the difference it makes, a good brush is a good investment. Assure yourself of a good job. Use a Lowe Brothers brush.

In selecting a paint brush, be sure to select one that is large enough for the job to be done. A brush too small may cause unsatisfactory results and lost time in application.

THE LEADER SINCE 1867

In 1867 William Louden invented the World's first hay carrier. Since that memorable date Louden has introduced practically all the new items that go to make up a modern barn.

VENTILATION

Complete systems for all farm buildings. Both electric and gravity. Keeps your animals healthy—keeps your building from rotting. Glad to give quotations.

WATER BOWLS

The best investment a dairyman can make! Increased milk soon pays for them. Two modern, improved bowls from which to choose. Louden introduced the first automatic bowl.

LITTER AND FEED CONVEYORS

A complete and modern line of litter and feed carriers and trucks. Cuts feeding and "cleaning out" time in half. Rigid or wire tracks. Wide range of prices.

STALLS AND STANCHIONS

Double, single, side post, lever, go-right, and tubular arch stalls. Wood-lined, adjustable, tubular, u-bar stanchions. A most complete selection. Get our prices.

HAY TOOLS

Louden pioneered hay unloading tools. Recently introduced the celebrated "Iron Claw" fork. Also fork and sling cars, pulleys, track. A complete line.

PLAN SERVICE

Thousands of floor plans and cross sections. Several barn experts. Let Louden plan your new or modernized buildings. Save time, worry and money. Have a modern, well planned barn.
